

Salesforce:

1. Create Custom Object (if not already)

Create **Employee__c** with fields:

Field	API Name	Type
Name	Name	Text
Emp ID	Emp_Id__c	Number (Unique)
Email	Email__c	Email
Birth Date	Birth_Date__c	Date
Department	Department__c	Text/Picklist

2. Apex Class (Menu-driven System)

```
public class EmployeeManagementSystem {
```

```
    // ♦ Add Employee
    public static void addEmployee(Integer empId, String name, String email, Date birthDate, String
dept) {

        // Validation
        if (empId <= 0) {
            System.debug(' ❌ Invalid Employee ID');
            return;
        }

        // Check unique ID
        List<Employee__c> existing = [
            SELECT Id FROM Employee__c WHERE Emp_Id__c = :empId LIMIT 1
        ];
        if (!existing.isEmpty()) {
            System.debug(' ❌ Employee ID must be unique');
            return;
        }

        Employee__c emp = new Employee__c(
            Emp_Id__c = empId,
            Name = name,
            Email__c = email,
            Birth_Date__c = birthDate,
            Department__c = dept
        );
    }
}
```

```
insert emp;
System.debug('✅ Employee Added Successfully');
}
```

// ♦ View All Employees

```
public static void viewEmployees() {

    List<Employee__c> empList = [
        SELECT Name, Emp_Id__c, Email__c, Birth_Date__c, Department__c
        FROM Employee__c
    ];

    for (Employee__c e : empList) {
        System.debug('ID: ' + e.Emp_Id__c +
            ', Name: ' + e.Name +
            ', Email: ' + e.Email__c +
            ', DOB: ' + e.Birth_Date__c +
            ', Dept: ' + e.Department__c);
    }
}
```

// ♦ Update Employee

```
public static void updateEmployee(Integer empId, String newName) {

    List<Employee__c> empList = [
        SELECT Id, Name FROM Employee__c WHERE Emp_Id__c = :empId LIMIT 1
    ];

    if (empList.isEmpty()) {
        System.debug('❌ Employee not found');
        return;
    }

    Employee__c emp = empList[0];
    emp.Name = newName;

    update emp;
    System.debug('✅ Employee Updated');
}
```

// ♦ Delete Employee

```
public static void deleteEmployee(Integer empId) {

    List<Employee__c> empList = [
        SELECT Id FROM Employee__c WHERE Emp_Id__c = :empId LIMIT 1
    ];
}
```

```
        if (empList.isEmpty()) {
            System.debug(' ❌ Employee not found');
            return;
        }

        delete empList[0];
        System.debug(' ✅ Employee Deleted');
    }

    // ♦ Menu (Console Output)
    public static void showMenu() {
        System.debug('===== Employee Management Menu =====');
        System.debug('1. Add Employee');
        System.debug('2. View Employees');
        System.debug('3. Update Employee');
        System.debug('4. Delete Employee');
    }
}
```

3. Run from Execute Anonymous (Console)

♦ Show Menu

```
EmployeeManagementSystem.showMenu();
```

♦ Add Employee

```
EmployeeManagementSystem.addEmployee(
    101,
    'Rahul',
    'rahul@gmail.com',
    Date.newInstance(2000, 5, 10),
    'IT'
);
```

♦ View Employees

```
EmployeeManagementSystem.viewEmployees();
```

♦ Update Employee

```
EmployeeManagementSystem.updateEmployee(101, 'Rahul Sharma');
```

♦ Delete Employee

```
EmployeeManagementSystem.deleteEmployee(101);
```
