

Static Website:

Connect to EC2

```
ssh -i key.pem ubuntu@<PUBLIC-IP>
```

Example:

```
ssh -i mykey.pem ubuntu@13.232.xxx.xxx
```

Update System

```
sudo apt update  
sudo apt upgrade -y
```

Install Apache Web Server

```
sudo apt install apache2 -y
```

Start Apache

```
sudo systemctl start apache2  
sudo systemctl enable apache2
```

Check Apache Status

```
sudo systemctl status apache2
```

Allow Firewall (Optional)

```
sudo ufw allow 'Apache'  
sudo ufw enable
```

Create Website File

Go to web root folder:

```
cd /var/www/html
```

Remove default page:

```
sudo rm index.html
```

Create new page:

```
sudo nano index.html
```

Paste:

```
<html>
<head>
<title>My AWS Website</title>
</head>
<body>
<h1>Static Website Hosted on AWS EC2</h1>
</body>
</html>
```

Save:

- CTRL + O
- Enter
- CTRL + X

Check Website

Open browser:

http://<PUBLIC-IP>

Example:

http://13.232.xxx.xxx

Remote Update Website

Edit anytime remotely:

```
sudo nano /var/www/html/index.html
```

or upload files using SCP:

```
scp -i key.pem index.html ubuntu@<PUBLIC-IP>:/tmp
```

Move file:

```
sudo mv /tmp/index.html /var/www/html/
```

Restart Apache After Changes

```
sudo systemctl restart apache2
```

Networking Settings

Security Group Inbound Rules:

Type	Port
------	------

SSH	22
-----	----

HTTP	80
------	----

HTTPS	443
-------	-----

Viva Short Answer

EC2 instance hosts the static website using Apache server. Security groups allow public access through HTTP/HTTPS, and website files can be updated remotely using SSH/SCP.
